Abstract of JP 2003085500 (A)

PROBLEM TO BE SOLVED: To control various application programs, files, folders, units and other objects with a simple operation. **SOLUTION:** Titles 30 for respective genres, symbolic illustrations 32 on respective control contents and the precise explanations 34 of the control contents by characters are recorded in an information recording medium 28 with a script file 26 including a content controlling the files, the folders, applications, the units and the other objects as an encoded picture 22. When an operator reads the desired encoded picture by an information processor, a decoding means 12C restores the script file 26 of the encoded picture and it is read by a scripting host application 20a and is performed. The various application programs, the files, the folders, the units and the other objects of a Web browser 20B and a mailer 20C are controlled.
